Animals on the Move (Animal Planet Animal Bites) - Goodreads

Many kinds of animals migrate, including bats, birds, large herbivores like caribou and elk, butterflies, fish, and marine mammals. Pacific salmon are born in freshwater streams and travel to the ocean to grow. When they reach adulthood, they travel back upstream (often up to 2,000 miles) to spawn. After overcoming obstacles like swift currents, fishing nets, and even waterfalls, they return to the exact spot where they hatched, lay their eggs, then die.
